

**OXFORD CAMBRIDGE AND RSA EXAMINATIONS**  
**A2 GCE**  
**F453/01**  
**COMPUTING**  
**Advanced Computing Theory**

**TUESDAY 17 JUNE 2014: Morning**

**DURATION: 2 hours**  
**plus your additional time allowance**

**MODIFIED ENLARGED**

<b>Candidate forename</b>						<b>Candidate surname</b>				
<b>Centre number</b>						<b>Candidate number</b>				

**Candidates answer on the Question Paper.**

**OCR SUPPLIED MATERIALS:**

**None**

**OTHER MATERIALS REQUIRED:**

**None**

**READ INSTRUCTIONS OVERLEAF**

## **INSTRUCTIONS TO CANDIDATES**

**Write your name, centre number and candidate number in the boxes on the front page. Please write clearly and in capital letters.**

**Use black ink. HB pencil may be used for graphs and diagrams only.**

**Answer ALL the questions.**

**Read each question carefully. Make sure you know what you have to do before starting your answer.**

**Write your answer to each question in the space provided. Additional paper may be used if necessary but you must clearly show your candidate number, centre number and question number(s).**

## **INFORMATION FOR CANDIDATES**

**The number of marks is given in brackets [ ] at the end of each question or part question.**

**The total number of marks for this paper is 120.**

**'Quality of Written Communication' will be assessed in this paper.**

**Any blank pages are indicated.**

## **Answer ALL questions**

**1 (a) An operating system uses scheduling. One method of scheduling is first come, first served.**

**(i) Explain why the first come, first served scheduling method may NOT be efficient.**

---

---

---

**[2]**

**(ii) Describe ONE other scheduling method.**

---

---

---

**[2]**

**(iii) Explain why scheduling is necessary.**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**[4]**

**(b) Explain why memory management is necessary.**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**[3]**

**(c) Paging may be used in memory management.**

**Describe paging.**

---

---

---

---

---

---

---

**[3]**

- 2 (a) When translating computer languages, intermediate code may be produced.**

**Explain the need for intermediate code and its purpose in a virtual machine.**

**The quality of written communication will be assessed in your answer to this question. [8]**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**(b) State THREE benefits of using library routines when a program is written.**

1 \_\_\_\_\_

\_\_\_\_\_

2 \_\_\_\_\_

\_\_\_\_\_

3 \_\_\_\_\_

\_\_\_\_\_

**[3]**

- 3 (a) (i) Give the name of the computer architecture that uses the fetch-execute cycle with a single control unit.

[1]

- (ii) Registers used during the fetch-execute cycle include the current instruction register (CIR), memory address register (MAR), memory data register (MDR) and program counter (PC).

Place ticks in the table to show which statements are correct during processing.

	CIR	MDR	PC
<b>Holds a binary value</b>			
<b>Always holds only an address</b>			
<b>May change more than once during a single cycle</b>			
<b>May pass a value to the MAR</b>			

[4]

**(b) (i) Compare a Complex Instruction Set Computer (CISC) architecture with a Reduced Instruction Set Computer (RISC) architecture.**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**[4]**

**(ii) Explain ONE advantage, other than cost, of RISC compared with CISC.**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**[2]**

**(c) Some computer systems use co-processors.**

**Explain the effect of using a co-processor system for each of the following applications.**

**(i) Complex calculations for scientific research.**

---

---

---

---

[2]

**(ii) Printing personalised letters to customers for an advertising campaign.**

---

---

---

---

[2]

- 4 (a) A real binary number may be represented in normalised floating point binary notation using 4 bits for the mantissa followed by 4 bits for the exponent, both in two's complement binary.**

**The following binary numbers are in the format described.**

**Calculate their denary values.**

**You must show your working.**

**(i) 01010110**

---

---

---

---

---

---

---

---

[3]

(ii) 01001110

---

---

---

---

---

---

---

---

---

---

[3]

(b) A real binary number may be represented in floating point binary notation using 7 bits for the mantissa followed by 5 bits for the exponent, both in two's complement binary.

(i) State which of the binary numbers P and Q is normalised. Give a reason for your answer.

$$P = 101100110001$$

$$Q = 110100110011$$

---

---

---

---

---

---

---

---

---

[2]

**(ii) The binary number R is NOT normalised. Write the normalised form of R.**

**You must show your working.**

$$\mathbf{R = 000110100101}$$

---

---

---

---

---

---

---

---

---

---

---

---

---

**[3]**

**5 (a) Data structures may be described as static or dynamic.**

**(i) State the meaning of the term static.**

---

---

**(ii) State ONE type of data structure that is always considered to be static.**

---

---

**(iii) State the meaning of the term dynamic.**

---

---

**(iv) Give ONE DISADVANTAGE of using a dynamic data structure.**

---

---

**[4]**

**(b) The list of positive even numbers up to and including 1000 is**

**2, 4, 6,... 500, 502,... 998, 1000**

**An attempt is to be made to find the number 607 in this list.**

**Use the values given to show the first three steps for:**

**(i) a binary search**

---

---

---

---

---

---

---

---

**[3]**

**(ii) a serial search**

---

---

---

---

---

---

**[3]**

**(iii) Explain the difference between binary searching and serial searching.**

---

---

---

---

---

**[2]**

**(iv) State ONE advantage and ONE disadvantage of a binary search compared with a serial search.**

---

---

---

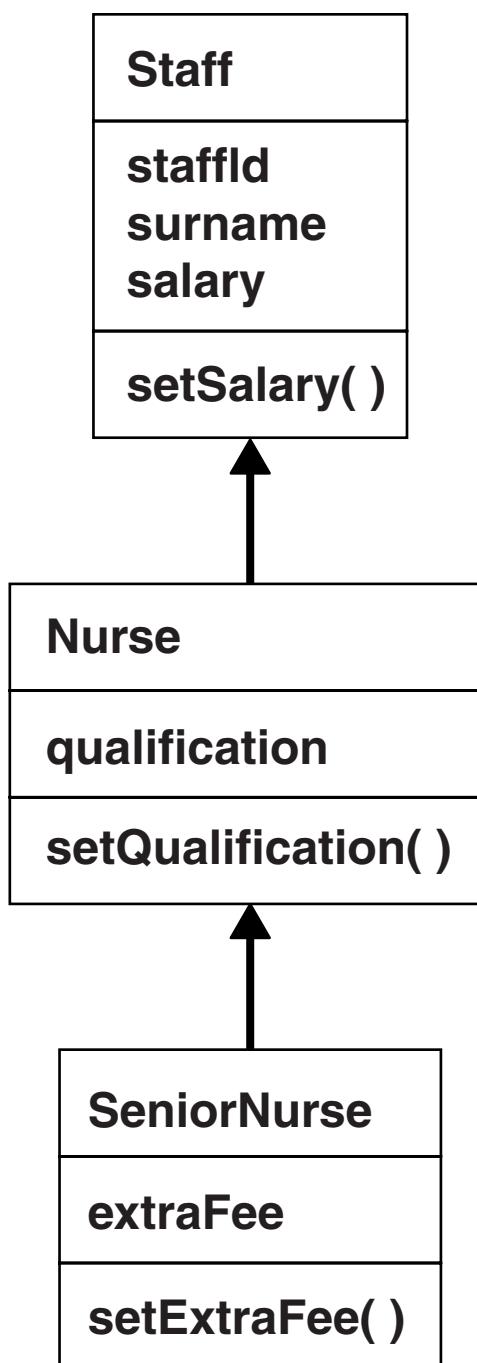

---

---

**[2]**

- 6 (a) A large health centre employs a number of nurses, each with a qualification. Some nurses are senior nurses, and these are paid an extra fee in addition to their salary.

The diagram below shows part of the system used.

**(i) State the type of diagram shown.**

---

---

[1]

**(ii) State the term that describes setSalary( ),  
setQualification( ) or setExtraFee( ).**

---

---

[1]

**(iii) Explain the meaning of the arrows in the  
diagram, using an example.**

---

---

---

---

[2]

- (iv) Mary Jones is a new employee at the health centre.

**State why the following program statement is NOT valid.**

Jones.setSalary(12000)

---

---

[1]

- (v) You may assume that thisSeniorNurse has been correctly defined as an object of SeniorNurse, and that x is a number.

**Explain why the program statement**

thisSeniorNurse.setSalary(x)

**is valid even though setSalary( ) is not shown in the SeniorNurse part of the diagram.**

---

---

---

---

---

---

---

---

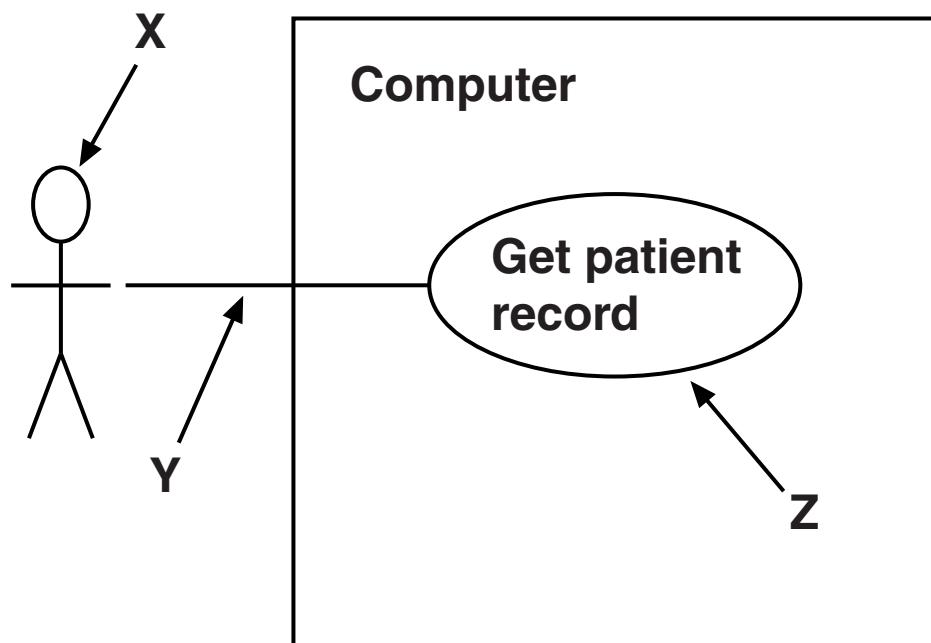

---

---

---

[3]

**(b) A use case diagram shows how a nurse uses the computer.**

**State the correct term for each feature on the diagram.**

**(i) the stick figure X**

---

---

**(ii) the line Y**

---

---

**(iii) the ellipse Z**

---

---

**[3]**

- 7 (a) (i) A procedural programming language may use procedures.

Explain the term procedural programming language.

---

---

---

---

[2]

- (ii) The same variable name may be used in more than one procedure in a program.

Explain how a variable named result may be used in different procedures without causing errors.

---

---

---

---

[2]

**(iii) Explain parameter passing.**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**[5]**

**(b) Algebraic notation may be infix or reverse Polish.**

**(i) Convert  $(p - q)/r$  to reverse Polish.**

---

---

---

**[2]**

**(ii) Convert  $stu^*$  to infix.**

---

---

---

**[2]**

# **BLANK PAGE**

- 8 (a) When writing a program, programmers may use low-level or high-level languages.**

**Explain why a low-level language is more suitable for programming a processor to control a washing machine.**

---

---

---

---

---

---

---

[3]

- (b) Place ticks in the table to show which statements apply to the modes of addressing shown for a low-level instruction in the form ADD 123.**

[4]

	Addressing mode			
	Immediate	Direct	Relative	None of these
<b>123 is the address of the data to use</b>				
<b>ADD is an operand</b>				
<b>The data to use in a calculation is 123</b>				
<b>The address 123 holds a value which is the address of the data to use</b>				

- (c) Caz is studying low-level languages. She has lost some of her notes on modes of addressing, but has the following part of an example.**

**Address in current instruction register (CIR) is 3**

**Address to be used is  $3+11=14$**

**Name and explain TWO modes of addressing that this example could show.**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**[4]**

# **BLANK PAGE**

- 9 (a) Discuss the suitability of flat files and relational databases for use by a family at home and for use in a large mail order company.**

**The quality of written communication will be assessed in your answer to this question.**

**[8]**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**(b) In any relational database, primary keys and foreign keys are used.**

**(i) What is a primary key?**

---

---

**[1]**

**(ii) Explain the use of a primary key as a foreign key.**

---

---

---

---

---

---

---

---

---

---

---

---

---

**[3]**

- 10 A particular programming language uses facts and rules. For one problem in a college, some of the program statements about students and courses are listed.**

**student (ben)  
student (cindy)**

**{Ben is a student}**

**science (computing)  
science (mathematics)**

**{Computing is a science}**

**language (english)  
language (french)**

**{English is a language}**

**studies\_science (A,B) if student (A) and science (B)  
studies\_language (C,D) if student (C) and language (D)**

**The examples you use in your answers to the questions must be based on the program statements listed.**

- (a) Give the name for this type of programming language.**

---

**[1]**

- (b) Give ONE example of a rule.**

---

**[1]**

**(c) Explain the term goal by writing an example.**

---

---

---

---

[2]

**(d) Explain the term instantiation, showing how it is used.**

---

---

---

---

[2]

**(e) Explain how backtracking is used.**

---

---

---

---

[2]
