Advanced GCE

Mark Scheme for June 2016

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

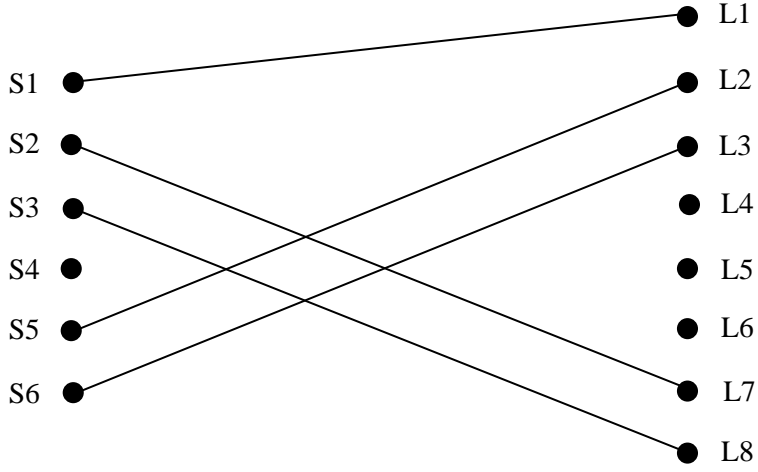

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Question	Answer	Marks	Guidance
(iii)	Repetition and counting 0 or >0 in generation <u>2</u> Number of repetitions specified with some justification – e.g. “experimental” Computation of probability Exact answer is 0.2928. (ref ...Galton-Watson branching processes)	M1 A1 M1 A1	between 0.2 and 0.4
(iv)	Repetition and counting 0, 1, 2, 3 or >3 in generation <u>3</u> Number of repetitions specified with some justification – e.g. “experimental” Computation of probabilities From 100000 simulations ... 0.345, 0.129, 0.148, 0.123, 0.255	M1 A1 M1 A1 A1	between 0.7 and 0.8 for first 4 probs 1 st prob 2 to 3 times greater than 2 nd , 3 rd and 4 th
(v)	Correct subtraction of their probs from (iii) and (iv) Exact answer is $0.34535 - 0.2928 = 0.05255$	B1

Question		Answer	Marks	Guidance
4	(v)	2000 2171 2100 2149 2180 2128 2239 2107 2276 2086 2291 2065 2283 2044 2260 2024 2237 2004 2215 1984 2193 1964	B1 B1	correctly rounding removing the “negative gains”
	(vi)	With $\alpha = 0.99$ Ulrike would need β to exceed 1.26 ... which seems unreasonable. With $\alpha = 0.995$ β would need to exceed 1.15. With $\alpha = 0.999$ β needs to be around 1.01. With $\alpha=1$ β can slip below 1 and still be OK	B1 B1	considering some appropriate α s considering corresponding β s
	(vii)	$(0.99 + \beta)^2 - 4\beta = 0.9801 - 2.02\beta + \beta^2 = (\beta - 1.01)^2 - 0.04$ For this to be positive we need $\beta > 1.21$	M1 A1
