CAMBRIDGE TECHNICALS

Checklist for installing SecureClient

We use SecureClient to deliver the Cambridge Technicals on-screen tests which must be installed on all test computers.
This checklist is for IT staff members who are involved in the set up of on-screen tests. For detailed guidance, see our website.

1 Check test computers meet system requirements

Test computers must be running the Windows 10 or 11 operating system.

2 Install and update SecureClient

The default installation location for SecureClient is:
C:\Users\Public\Surpass\SecureClient\

3 Check candidates' permissions

Candidates log in to the test computers – they must have permission to allow full read/write access to the SecureClient folder.

4 Schedule an HTML Installation Test in Surpass

Start SecureClient on a test computer, enter the keycode and click ok. Repeat as required.

5 Check firewall and proxy server

Configure firewall and proxy server to allow SecureClient to access the following sites on ports 80 and 443:

ocr.surpass.com
(including **ocr.surpass.com/DeliveryService** and
ocr.surpass.com/DeliveryUI on port 443 only)
cms.surpass.com
cmspublic.surpass.com
demo.surpass.com
cdnukshared.surpass.com (on port 443 only)
