

# Sample Question Paper AS Level Psychology

H169/02 Core studies in psychology

Time allowed: 1 hour 30 minutes

No extra materials are needed.

Please write clearly	in black ink. <b>Do</b>	not writ	e in the barcodes.		
Centre number			Candidate number		
First name(s)				•	
Last name					
					_

## **INSTRUCTIONS**

- Use black ink.
- Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.
- Answer all the questions.

#### **INFORMATION**

- The total mark for this paper is 56.
- The marks for each question are shown in brackets [ ].
- Quality of extended response will be assessed in questions marked with an asterisk (\*).
- This document has 12 pages.

#### **ADVICE**

Read each question carefully before you start your answer.

## Section A

## **Core studies**

Loftus and Palmer inves	stigated eyewitness testimony.	
Describe the <b>two</b> types	s of information that go into an individual's memory when witr	nessing
an event, according to L	Loftus and Palmer.

#### Section C

## Data analysis and interpretation

#### Sesame Street and learnt behaviour?

8

Sesame Street is an educational TV programme which aims to show that television can have positive effects on young children in preparation for school. Research has shown that viewers of Sesame Street were better prepared to learn to read and do arithmetic, and this readiness seemed to be a result of watching the show and not a result of other variables, such as how educated their parents were or how much they read to their children. The advantage held even through secondary school, with students who had watched the programme at age 5 gaining consistently higher grades in English, mathematics and science compared to those who had not watched the programme at a young age. Longitudinal research has also shown that watching Sesame Street is related to gaining a greater sense of competence, being less aggressive and demonstrating more motivation for academic achievement. Teenagers who are less aggressive can take part in school more effectively and will in turn feel good about their achievements because they will be rewarded for their motivation and academic success

**Sample Mark Scheme** 

AS Level Psychology H169/02 Core studies in psychology

MARK SCHEME

Duration: 1 hour 30 minutes

**MAXIMUM MARK 56** 

Version: Sample

This document has 15 pages

#### MARKING INSTRUCTIONS

#### PREPARATION FOR MARKING

#### **MARKING**

- 1. Mark strictly to the mark scheme.
- 2. Marks awarded must relate directly to the marking criteria.

## 3. Crossed Out Responses

Where a candidate has crossed out a response and provided a clear alternative then the crossed-out response is not marked. Where no alternative response has been provided, examiners may give candidates the benefit of the doubt and mark the crossed-out response where legible.

#### **Rubric Error Responses - Optional Questions**

Where candidates have a choice of question across a whole paper or a whole section and have provided more answers than required, then all responses are marked and the highest mark allowable within the rubric is given. Select the highest mark from those awarded. (The underlying assumption is that the candidate has penalised themselves by attempting more questions than necessary in the time allowed.)

## **Multiple Choice Question Responses**

When a multiple choice question has only a single, correct response and a candidate provides two responses (even if one of these responses is correct), then no mark should be awarded (as it is not possible to determine which was the first response selected by the candidate).

## **Contradictory Responses**

When a candidate provides contradictory responses, then no mark should be awarded, even if one of the answers is correct.

Short Answer Questions (requiring only a list by way of a response, usually worth only one mark per response)

Where candidates are required to provide a set number of short answer responses then only the set number of responses should be marked. The response space should be marked from left to right on each line and then line by line until the required number of responses have been considered. The remaining responses should not then be marked. Examiners will have to apply judgement as to whether a 'second response' on a line is a development of the 'first response', rather than a separate, discrete response. (The underlying assumption is that the candidate is attempting to hedge their bets and therefore getting undue benefit rather than engaging with the guestion and giving the most relevant/correct responses.)

Short Answer Questions (requiring a more developed response, worth **two or more marks**)

If the candidates are required to provide a description of, say, three items or factors and four items or factors are provided, then mark on a similar basis – that is downwards (as it is unlikely in this situation that a candidate will provide more than one response in each section of the response space.)

Longer Answer Questions (requiring a developed response)

Where candidates have provided two (or more) responses to a medium or high tariff question which only required a single (developed) response and not crossed out the first response, then only the first response should be marked. Examiners will need to apply professional judgement as to whether the second (or a subsequent) response is a 'new start' or simply a poorly expressed continuation of the first response.

- 4. Always check the pages (and additional objects if present) at the end of the response in case any answers have been continued there. If the candidate has continued an answer there, then add a tick to confirm that the work has been seen.
- 5. Award No Response (NR) if:
  - there is nothing written in the answer space

Award Zero '0' if:

- anything is written in the answer space and is not worthy of credit (this includes text and symbols).
- 6. For answers marked by levels of response:
  - a. To determine the level start at the highest level and work down until you reach the level that matches the answer
  - b. To determine the mark within the level, consider the following

Descriptor	Award mark	
On the borderline of this level and the one below	At bottom of level	
Just enough achievement on balance for this level	Above bottom and either below middle or at middle of level (depending on number of marks available)	
Meets the criteria but with some slight inconsistency	Above middle and either below top of level or at middle of level (depending on number of marks available)	
Consistently meets the criteria for this level	At top of level	

# 7. Subject Specific Marking Instructions

## **Section A: Core studies**

Q1: Grant et al. investigated context-dependent memory. Identify the two types of tests used to assess memory in this study. (2 marks) [1+1]				
Marking Criteria (AO1 x 2)	Guidance			
1 mark: Multiple choice test/recognition test.	Only accept answers as indicated in marking criteria.			
1 mark: Short answer test/recall test.				
0 marks: No creditworthy response.				

Q2: Loftus and Palmer investigated eyewitness testimony. Describe the **two** types of information that go into an individual's memory when witnessing an event, according to Loftus and Palmer. (4 marks) [2+2]

event, according to Lortus and Familier. (4 marks) [2-2]					
Marking Criteria (AO1 x 2, AO2 x 2)	Guidance				
For each kind of information:	The two kinds of information are:				
1 mark: Type of information identified.	<ul> <li>Information encoded/gathered at the event – such as in L&amp;P's study – the information about the cars involved in the car accident video clips.</li> <li>Post event information – such as external information supplied after the perception of the original event, e.g. in L&amp;P's study – the external information was in the form of leading questions.</li> </ul>				
1 mark: Type of information described with some detail or an example					
from Loftus and Palmer's study.					
0 marks: No creditworthy response.					

Marking Criteria (AO1 x 2, AO2 x 2)	Guidance		
1 mark: Relevant difference explicitly identified.	Possible differences:  Type of data collected. Sperry collected qualitative data (e.g. written notes of what participants said when flashed an image) whereas Casey collected quantitative data (e.g. % of false alarms on the Go/No tasks).		
1 mark: Identified difference is explained.	Type of research method used. Sperry's research was a snapshot study (e.g. conducted in the lab at one point in time rather than assessing the split brain patients abilities over time) whereas Casey used a longitudinal		
<b>1 mark:</b> Relevant supporting detail/explicit example for the difference given from the Sperry study.	study (e.g. over a 40 year span starting with children aged 4 completing the Marshmallow test through to completing the Go/No tasks aged mid-40s).		
1 mark: Relevant supporting detail/explicit example for the difference given from the Casey et al. study.	<ul> <li>Use of objective measures. Casey used objective measures (e.g. fMRI scanner to measure activity in different areas of the brain) whereas Sperry did not use any brain imaging techniques (e.g. he made assumptions about what was going on in the brain through the participants' behaviour, rather than directly measuring brain activity).</li> </ul>		
0 marks: No creditworthy response.	Any other appropriate point/relevant supporting examples.		

Q4: Explain one strength of the sample used by Freud in his study of Little Hans. (3 marks)					
Marking Criteria (AO1 x 1, AO2 x 1, AO3 x 1)	Guidance				
<b>3 marks:</b> A strength of the sample identified and explained in detail in the context of Freud's study of Little Hans.	<ul> <li>Possible strengths:</li> <li>Studying a small sample made it easier for Freud to conduct a longit study to show developments/changes in Hans' behaviour.</li> <li>Freud was able to conduct an in-depth study so his theories of psychosexual development could be explored.</li> </ul>				
<b>2 marks</b> : A strength of the sample identified and briefly explained in the context of Freud's study of Little Hans.					
1 mark: A strength of the sample identified.	<ul> <li>Any other appropriate point.</li> </ul>				
0 marks: No creditworthy response.					

Q5: Outline one way participants were deceived in Milgram's study of obedience. (2 marks)					
Marking Criteria (AO1 x 2)	Guidance				
2 marks: A clear and accurate outline that BOTH identifies a way participants were deceived AND explains the nature of the deception.	Possible answers:  Participants were lied to about the purpose of the study – they were told the study was about memory when it was, in fact, about obedience.  Participants were made to believe that the electric shocks were genuine				
1 mark: An unclear or partial outline that EITHER identifies a way participants were deceived OR explains the nature of the deception.	<ul> <li>(due to the acting of Mr Wallace or they fact that they themselves received a 45v shock) whilst in reality they were fake/the learner did not receive any shocks/no shocks were given.</li> <li>Participants were made to believe that they had an equal chance of becoming either the teacher or the learner (due to the 'draw' at the start of</li> </ul>				
0 marks: No creditworthy response.	the study) whereas in reality the selection process was rigged so the participant was always the teacher.  Any other appropriate point.				

# Component H169/02 Mark Scheme Sample Paper

Marking Criteria (AO1 x 1, AO2 x 1, AO3 x 1)	Guidance		
<b>3 marks:</b> A strength of gathering quantitative data identified and explained in detail in the context of Baron-Cohen's study.	Possible strengths:  Ease of analysis – for example can calculate descriptive statistics for		
<b>2 marks:</b> A strength of gathering quantitative data identified and briefly explained in the context of Baron-Cohen's study.	quantitative data, such as the mean number of correct answers on the Eyes Task.  Ability to draw comparisons between groups – for example, can compare		
1 mark: A strength of gathering quantitative data identified.	the number of correct answers on the Eyes Task between 'normal' male and females to conclude who has better ability to read the mind in the eye		
0 marks: No creditworthy response.	Any other appropriate point.		

# Section B: Areas, perspectives, issues and debates

Marking Criteria (AO1 x 2, AO2 x 1)	Guidance	
<b>3 marks:</b> Relevant weakness identified, explained in detail and supported with evidence from one appropriate core study.	<ul> <li>Possible weaknesses:</li> <li>Claiming that behaviour is due to nature is very reductionist as it on focuses on one influence on human behaviour, failing to consider t interactions between multiple influences (e.g. Casey suggests that inability to delay gratification is related to activity in the ventral</li> </ul>	
<b>2 marks:</b> Relevant weakness identified AND explained in detail OR supported with evidence from one appropriate core study.	striatum/inferior frontal gyrus and fails to account for the fact that some individuals may not be able to delay gratification due to the upbringing/being spoiled/always getting what they want right away).  Claiming that behaviour is due to nature is very deterministic as it implies	
1 mark: Relevant weakness identified.	that people can't choose how to behave and so can't be held accountable for their behaviour (e.g. from Casey's study - by suggesting that activity i the VS/IFG areas of the brain is responsible for an inability to delay gratification, could be used to 'excuse' someone for stealing as they are suggesting it is beyond their control).	
0 marks: No creditworthy response.	<ul> <li>Any other appropriate point.</li> <li>Credit any relevant core study that makes reference to 'nature' as a cause of behaviour if used appropriately to support the point made.</li> </ul>	

Marking Criteria (AO1 x 3)	Guidance		
1 mark: Understanding of the social area shown.	<ul> <li>Possible ways to demonstrate understanding of the social area:</li> <li>Reference to the influence of other people on behaviour.</li> <li>Reference to the influence of the social situation / social context.</li> <li>Reference to the social environment.</li> </ul>		
1 mark: Understanding of situational explanation of behaviour shown.	<ul> <li>Possible ways to demonstrate understanding of situational explanation of behaviour:</li> <li>The idea that behaviour is a response to the situation a person finds themselves in and is therefore a product of external factors.</li> <li>The fact that situations change, and therefore behaviour can change in response to the situation.</li> </ul>		
<b>1 mark:</b> Link between the social area and situational explanations clearly shown.			
0 marks: No creditworthy response.

# Section C: Practical applications

Marking Criteria (AO1 x 2, AO2 x 2)	Guidance	
For each point made:	Possible defining principles/concepts:	
<b>1 mark:</b> Understanding of a defining principle/concept of the developmental area shown.	<ul> <li>Changes in behaviour occur throughout the lifespan.</li> <li>Behaviour is a result of the interaction between nature (inherited factors) and nurture (lifetime experiences).</li> <li>Any other appropriate point.</li> </ul>	
<b>1 mark:</b> Clear explanation of how the stated principle links to the article.	<ul> <li>Possible links to article (The link will depend on the principle referred to):</li> <li>Changes through lifespan could be linked to the longitudinal research showing behaviour at age 5 and in later teenage years.</li> <li>Nature/nurture interaction could be linked to the fact that the article only</li> </ul>	
0 marks: No creditworthy response.	refers to 'nurture variables' (e.g. watching Sesame Street and parental education) but this could interact with natural/innate levels of intelligence to produce the greatest effect.  • Any other appropriate link.	

Marking Criteria (AO1 x 4, AO2 x 2)	Guidance						
For each finding given:	Findings from the study include:						
<b>3 marks:</b> Finding from the Bandura et al. study correctly stated/identified, with detailed explanation given as to how this finding relates to the article.	<ul> <li>Overall boys produced more imitative physical aggression than girls.</li> <li>Children in the aggressive condition showed significantly more imitation of physical and verbal aggressive behaviour than children in the non-aggressive or control conditions.</li> <li>Children who saw the same-sex model imitated the model's behaviour significantly more in some categories.</li> <li>The behaviour of the male model exerted greater influence than the femal model.</li> </ul>						
<b>2 mark:</b> Finding from the Bandura et al. study correctly stated/identified, with brief explanation given as to how this finding relates to the article.							
<b>1 mark:</b> Finding from the Bandura et al. study correctly stated/identified.	<ul> <li>Any other appropriate finding.</li> <li>Possible links to article:</li> <li>Gender differences in imitation of role models/characters on television.</li> </ul>						
0 marks: No creditworthy response.	<ul> <li>Different types of role model/characters on television will have differing type of influences on children.</li> <li>Any other appropriate link to the article.</li> </ul>						

Level	Marking Criteria (AO2 x 4)	Guidance					
	For the suggested strategy knowledge and understanding is applied to a practical suggestion made in a theoretical context as given in the question:	Candidates are expected to explain one strategethat teachers could use to encourage sharing					
Level 4 (4 marks)	<ul> <li>Excellent application of knowledge and understanding of scientific ideas, processes, techniques and procedures shown by suggesting a valid strategy that teachers could use to encourage sharing behaviour in children.</li> <li>Clear explanation of the strategy given including several different details about how the strategy could be implemented.</li> <li>The strategy is explicitly related to the context of the question.</li> </ul>	behaviour in children.  The suggested strategy should be grounded in psychological research/theory.  The strategy should be a suggestion that a					
Level 3 (3 marks)	Good application of knowledge and understanding of scientific ideas, processes, techniques and procedures shown by suggesting a valid strategy that teachers could use to encourage sharing behaviour in children.	psychologist might actually make (so, for example, they should be within the ethical guidelines).					
(3 marks)	<ul> <li>Explanation of the strategy is given in reasonable detail with some details about how the strategy could be implemented.</li> <li>The strategy is explicitly related to the context of the question.</li> </ul>	Suggested strategies could include the following:  Use of positive reinforcement (e.g. rewards for displaying sharing behaviour)					
Level 2 (2 marks)	<ul> <li>Limited application of knowledge and understanding of scientific ideas, processes, techniques and procedures shown by suggesting a valid strategy that teachers could use to encourage sharing behaviour in children.</li> <li>Explanation of the strategy is given in limited detail with few details about how the strategy could be implemented.</li> <li>The strategy may not be explicitly related to the context of the question.</li> </ul>	<ul> <li>Showing children role models behaving in desired ways in the hope that the child will imitate this behaviour instead (based on Bandura)</li> <li>Use of punishment (e.g. taking away a child's break time at school until they behave in an appropriate way)</li> </ul>					
Level 1 (1 marks)	<ul> <li>Basic application of knowledge and understanding of scientific ideas, processes, techniques and procedures shown by suggesting a valid strategy that teachers could use to encourage sharing behaviour in children.</li> <li>Explanation of the strategy given is in minimal, if any, detail about how the strategy could be implemented.</li> </ul>	<ul> <li>Any other appropriate strategy.</li> </ul>					

Level	Marking Criteria (AO3 x 6)	Guidance				
Level 4	<ul> <li>The response demonstrates an excellent ability to analyse, interpret and evaluate scientific information, ideas and evidence in terms of the strategy suggested.</li> </ul>	Evaluation points could include:				
(6 marks)	<ul> <li>The response demonstrates excellent evaluation using a range of points/ideas (which are likely to include issues and debates).</li> <li>The evaluation points are in the context of the suggestion presented in Q8c.</li> <li>A balanced argument should be presented with both strengths and weaknesses discussed, but there does not need to be equal balance between both.</li> </ul>	<ul> <li>Commenting on the suggestions in relation to the different debates (e.g., linking them to the nurture side of the nature-nurture debate)</li> <li>Commenting on methodological issues (e.g., explaining why a particular role model may be ethnocentric).</li> </ul>				
	<ul> <li>There is a well-developed line of reasoning which is clear and logically structured. Information presented is relevant/appropriate and substantiated.</li> </ul>	Reference to the psychological basis of the				
Level 3	The response demonstrates a <b>good</b> ability to analyse, interpret and evaluate scientific information, ideas and evidence in terms of the strategy suggested.	suggestion (e.g., pointing out that research based on children aged 3-5 years may not necessarily apply to children who are older)				
(4-5 marks)	<ul> <li>The response demonstrates <b>good</b> evaluation using a range of points/ideas (which are likely to include issues and debates).</li> <li>The evaluation points are in the context of the suggestion presented in Q8c.</li> </ul>	<ul> <li>Practical considerations (e.g., the financial cost of implementing a suggestion).</li> <li>Any other appropriate point.</li> </ul>				
	<ul> <li>A balanced argument should be presented with both strengths and weaknesses discussed, but there does not need to be equal balance between both.</li> <li>There is a line of reasoning presented with some structure. Information presented is mostly relevant/ appropriate and supported by some evidence.</li> </ul>	<b>NB.</b> Students can still achieve marks at all four levels here regardless of the level achieved in Q9c. For example, a student who has achieved				
Level 2	<ul> <li>The response demonstrates a <b>limited</b> ability to analyse, interpret and evaluate scientific information, ideas and evidence in terms of the strategy suggested.</li> </ul>	Level 1 in Q8c when suggesting/explaining strategies, could achieve marks up to Level 4 in				
(2–3 marks)	<ul> <li>The response demonstrates limited evaluation using a limited range of points/ideas (which are likely to include issues and debates).</li> </ul>	Q8d for their evaluation of the suggested strategies.				
	<ul> <li>The evaluation points are in the context of the suggestion(s) presented in Q8c.</li> <li>The argument may not be balanced, e.g., only strengths or weaknesses may be discussed.</li> </ul>					
Level 1	<ul> <li>The response has limited structure. Information presented is sometimes appropriate.</li> <li>The response demonstrates a basic ability to analyse, interpret and evaluate scientific information, ideas and evidence in terms of the strategy suggested.</li> </ul>					
(1 marks)	<ul> <li>The response demonstrates basic evaluation using a very limited range of points/ideas.</li> <li>The argument may not be balanced, e.g., only strengths or weaknesses may be discussed.</li> <li>The response is poorly structured. Information presented is rarely relevant/appropriate.</li> </ul>					
0 marks	No creditworthy response.
